**Abstract:** As you read this article, you will be able to learn about modern technologies and the role of internships in teaching English to preschoolers.

**Key words:** innovative methods, young children, education, teaching methods.

Decision of the President of the Republic of Uzbekistan on Further improvement of the preschool education system, material and technical base strengthening and expanding the network of pre-school, educational institutions providing with pedagogical personnel, strictly increasing the level of children's preparation for school, using modern educational programs and technologies in the educational process, developing children's intellectual, moral, aesthetic and physical development in every way in order to create conditions for development: taking into account the leading foreign experience of raising children in all intellectual aspects, providing conditions for moral, aesthetic and physical development; improving the quality of preschool education in preschool educational institutions the quality of children's preparation for school and the educational process should be completely improved modern educational programs that are widely used in the world and application of technology;

Children 5-6 years old to study in preschool educational institutions formation of 6100 short-term groups; taking into account modern pedagogical technology and methods training and qualification of teaching staff for preschool educational institutions improvement of educational plans and programs of higher schools; Improvement of the territory of preschool educational institutions.

Ensure the budget of the Republic of Karakalpakstan, regions and Tashkent city funds from local budgets for equipping preschool educational institutions - Republic of Uzbekistan state budget funds; funds of international financial organizations, organizations and donor countries, sponsored donations of legal and natural persons, as well as legal documents other non-prohibited sources.

During the years of independence in the republic, the national system of education and training was state it was raised to the level of the main task of politics. Uzbekistan It was developed under the direct leadership of the first president of the republic and the world. the national program of personnel training, which has gained wide recognition in the society as a result of its successful implementation, a unified system of continuous education was created in the republic is made.

Currently, preschool and primary education is our capital. It was organized in higher educational institutions of Tashkent and Samarkand regions. In my opinion, in this direction, news should be introduced in other regions as soon as possible. That is, we accelerate the introduction of foreign languages in preschool educational institutions we have to develop. There is a proverb in our people that says "From a child". This is not If we give serious importance to the teaching of foreign languages

from an early age, our early future will be more beautiful than this. Today's kids can do it. I think we should show them the right way.

Therefore, learning the languages of economic science and culturally developed countries is the main factor in mastering the achievements of science and world development. Exemplary educational centers that respond to the needs of the time can be an example can be In these exemplary educational centers, young personnel study in various fields. We teach the language to children not only in classrooms, that is, in preschool educational institutions, but also by taking them on a walk in the heart of nature, ensuring their safety, colorful, interesting, Let's play funny games in foreign languages. These children are spiritual and has a positive effect on the state of mind. It is necessary for children to study in small can be boring, nature and environment lift children's spirits.

They try to learn the language more deeply and we don't just take it to the lap of nature. we can get out, but we can turn them into zoom would be appropriate. It helps children to increase their vocabulary.

In such cases, we need houses for preschool educational institutions we have to decorate with exhibition equipment. It is surrounded by colorful flowers, animals, soft toys, toys of various cartoon characters. it is necessary to enrich. The walls of the room are in the color of the sun, or light blue or green we have to paint with colors. Because colors always raise the mood of our children.

Language learning also depends on age. According to psychologists, children learn language faster and easier than adults. Learning a language is natural for children children imitate more than adults.

Too much time is one of the main reasons for this. It should be said that young children do not understand the meaning of information and memorize it mechanically. That's why Grammatical understanding of teaching English to elementary school students don't start giving. Otherwise, the child can be stressed from the first step of learning foreign languages.

In my opinion, it would be worthwhile to teach your children in the following areas.

- it is difficult to explain or remember with songs and poems; teaching letters or meaningless combinations to a tune;
- education with games related to mental and physical activity;
- through cartoons. Children use cartoon sentences when learning language even if they don't understand it, they use it through the actions of cartoon characters

tries to understand words;

- Visual aids, various pictures, stories, books, etc it can be from different disciplines.

We know that children are curious. They quickly get bored with the sameness. That's why therefore, it is not always necessary to teach them with the same method. Otherwise, children will learn how the teacher teaches and prepare for it. Learning new methods increases children's efforts.

For some purposes, think about vital communication and the ability to benefit from the foreign language;

- to develop more foreign language learning; head to arouse interest in the life and culture of the countries. To master the psychology of preschool children we can say that they are Nuts phonetics and

Intonation is aynixa in accordance with the beginning of learning boskichning is used, it has a variety of tools and special didactic tools. Access Possible, phonetic hearing, nootk breath narrating is the main means for the home.

There is another reason why it is better to learn a language at an early age. Teaching children is different from school students and adults services approach based on age. It is important to remember the activities. Pre-school age, English language Learning, gradually, the basics of communicative competence developed, but the British organization has its own control:

- phonetic point of view repeat English words teacher, se language or The speaker is in the organ, that is, attention, phonetic listening, etc to control the loss of boskichich-boskich;

- English language enriching, consolidating and activating wealth;

- it is related to the work to improve the number of simple grammatical structures

Pain Methodology of continuous teaching of processing. The age at which your child's language skills are developed is different. Public aspects of Olgan Hold Construction and legislation you need to be made. Foreign language of meeting, motivation and you need to be made. Children is a psychologist for foreign languages.

It is necessary to treat and determine such improvement motivationni is the method of playing. Ritual is both an organization of form and known to children method of teaching English copy poems, songs, try rhymes and organize others.

Playing in foreign language education is not against the activity, but with it organic elimination is good.

In short, modern language teaching is more cultural new knowledge aimed at forming a person delivery to children through systematic innovative methods is appropriate. A foreign language for preschool children age-appropriate creative and didactic games and open in teaching modern methods of their personal development with training form on the basis of In education, every activity is new successful from information technology and computer devices the use of visual materials is useful for children application of products and strengthening of the result.
