

INFLUENCE OF GLOBALIZATION PROCESSES ON STUDENTS

Tursunboyeva L.T.

*Teacher of Uzbek State University of
Physical Culture and Sports*

Annotation: Instead of TV and radio channels broadcasting around the clock for the most part useless and not enlightening pop music, movies and TV series we need to create high-quality multimedia product (television and radio channel, educational magazine for young people, such as Technology of Youth) it is aimed at raising the younger generation healthy and harmoniously developed in all respects.

Key words: culture, conditions, globalization, influence, adolescents, traditions, spirituality, demonstrate, responsibility.

This topic is considered to be one of the most essential nowadays. To achieve this goal it is necessary to identify the harm of it.

The world has become more connected than ever before through the increase in technological advancements and economic integrations. Advanced economies are formed as domestic businesses transform into international ones and further contribute to the spread of technology around the world.

There are several benefits of globalization, such as increased international trade and cooperation and less international aggression. Social globalization—the sharing of ideas and information between countries—has led to innovation in the medical, technological, and environmental preservation industries. Additionally, globalization has improved the quality of life in several developing nations. This includes implementing efficient transportation systems and ensuring accessibility to services such as education and healthcare. However, globalization can also have negative effects on society, such as increased income inequality and substandard working conditions in developing countries that produce goods for wealthier nations. Income inequality is directly related to globalization as it further increases the gap between more advanced and developing areas of a nation. As a result, it can also increase the risk of societal violence. Along with its societal effects, globalization has a lasting impact on the environment—and typically not a positive one. For the protection of our children and adolescents from the negative influence of popular culture and the globalization processes, it is necessary at an early age to instill in them a love and respect for our culture and history, to create conditions for learning various crafts and traditions of our people. Also in the early grades in school must teach our children in conjunction with the universal values of peace, justice and goodness, to inculcate in

them the basics of Islamic spirituality, morality and ethics. So we can solve two problems at once:

1. Countering the negative influence of popular culture and globalization processes on children and adolescents
2. Responses to the introduction and planting in the fledgling teenage consciousness alien to our culture and society religious views and ideas!

Instead of TV and radio channels broadcasting around the clock for the most part useless and not enlightening pop music, movies and TV series we need to create high-quality multimedia product (television and radio channel, educational magazine for young people, such as Technology of Youth) it is aimed at raising the younger generation healthy and harmoniously developed in all respects. It is necessary to carry out organized and targeted seminars and meetings masters of their craft in various fields of modern human life (engineers, doctors, managers, athletes, etc.), so they told them about their profession, life and work experience. As a result, young people will be able to see the representatives of various professions and to begin to determine their future path in life. They will be motivated to master a particular profession that they like, and then no different computer games or popular culture will not be able to lure them and make their slaves. At this time and again pointed our President Islam Karimov: "Do not be worthy subjects for books, movies, life and work of many of our compatriots who are gaining credibility with their knowledge, the results achieved in the most famous universities of the world, dozens of our sons and daughters Because the example of the life and activities, achievements of people clearly demonstrate the presence of our great features, what heights we can achieve. " It is necessary to equip all schools with modern teaching methods and the necessary equipment for effective student learning. And also to provide students with modern IT tools for self-education, e-book reader for example. Turkey has provided a modern tablet of their students in the amount of \$ 10.6 million. Our children are worse? As our President Islam Karimov say: "Our children have never been poorer (less affluent) and the other will never be poor (less well)!

Since adolescence boys tend to to quickly become a "real man" and seek to imitate the adult males in the first place they need to form an image of the real man, is necessary for the culture of our people and society, ie, honest, courageous, responsible, intelligent and strong in all respects defender of the motherland without bad habits and abnormal addictions. How to achieve this?

Instead of the competition on skill games computer games create specialized training games. For example, instead of racing computer games without rules and survival training game on traffic rules and driving skills of different types of vehicles in the same interactive and entertaining fashion as in those games. Instead of computer games in which the characters are trying to kill each other, or tell a friend, you must

create a game for the development of adolescent boys as future military service officials and defenders of the Motherland. It should be based on a specific part of computer clubs (internet cafe) to create specialized training centers for teenagers on computer literacy and programming, as teens have the desire to computers in the classroom and in the school in 45 minutes sessions they cannot catch all the necessary training material. To accomplish this, in addition to government regulations, it will be necessary entrepreneurial responsibility and the will of the business community, as well as demand from parents. Researchers distinguish several dimensions of globalization, chiefly among them they emphasize on political, social, and economic models. The modern political approach pertains to the coordination and cooperation between different governments. National partnerships were primarily created to overcome such global problems as wars, diseases, hunger, and environmental pollution. The social approach deals with human interaction as social media and the Internet allow people to communicate without barriers. For instance, everybody knows about the American dream, Russian ballet, or Chinese professional chess players since information spreads very fast. An economic dimension pertains to commercial corporations. They have headquarters worldwide which allow them to influence particular domestic policy. This report provides an extensive approach to world integration revealing both the pros and cons of its worldwide influence. It explains how our world became a global village where everyone who has access to the Internet can purchase products and services. People can also be employed and work remotely without the hustle of traveling and settling in a foreign state.

What is more, this article highlights both negative and positive globalization effects which take place in developed countries as well as those which are just developing. Student exchanges are of great value for both of these groups. It is possible to study online and achieve a degree without having to relocate to a foreign state. Most business people use this available means of interaction to get in touch with directors as well as CEO's of successful traders to invest their money and discuss possible profits and dividends.

This paper also gives an opinion on disadvantages, for instance, employment shifts or wage gaps. Job hunting became a multinational trend. The most affected employees are those from developed countries as employers can hire immigrants who have smaller salaries. Several thousand local companies go bankrupt each year as a result of price fluctuations. States which have access to cheap raw materials and labor sell their products at a low cost via online platforms. This results in bringing down various companies which are pressured to decrease prices and obtain minimum profits. Our fundamental issue is how to utilize the advantages of worldwide integration and minimize its disadvantages. It's evident that the positive influence outweighs the negative, but it seems to affect dramatically common daily life. For instance, in some

developed countries, a couple have several part-time jobs almost around the clock to pay for their mortgage, car loan, and afford basic needs. In such cases, states should raise their minimum wages or ensure employers don't hire remote workers abroad. To implement these solutions to the problem will need to throw all the power (economic, political, and scientific) of our people, to collect the most professional managers, IT professionals, psychologists and teachers! All this will be very very expensive for the state budget. But I think you can save on not very important ways. For example, in the financing of the football team, from the victories which our children smarter, stronger and healthier will not!

I.A. Karimov: "Our next goal is to force the general public, intellectuals, scientists and artists, especially workers spiritual and educational sphere, for new levels of activities aimed at improving and approval of the basic principles of national independence ideology in people's minds".

In circumstances where the amount of accumulated human knowledge is growing and doubling every year, it is necessary from the very first years of teaching the pupils to develop the skills of effective learning and most importantly – self-learning. It is impossible to make a person, a fortiori a child to do anything if he does not want or is not aware for what is to be done. There is only one the kind method to make a man to do anything and is to make it so that he wanted to do it.

Life example. Father explained to her child, who "studied" only when he was forced to learn, that he had to study only for himself and that education is necessary only to himself. After that, the child no longer forced to make do homework, teach poetry, etc. He stubbornly and self-started, and when he could not understand something he asked for help from their parents!

But even more power than the power of the teacher belongs to the parents. First of all, it is in the family, by the meaningfully efforts of parents in early childhood form the basis upon which then teachers will continue to build and develop the child.

This tells us that the education of the younger generation must first be given a lot of attention to their spiritual and moral education. After all, the spiritual and moral healthy generation can protect their homeland and make a huge contribution to its development and prosperity.

Since adolescence boys tend to to quickly become a "real man" and seek to imitate the adult males in the first place they need to form an image of the real man, is necessary for the culture of our people and society, ie, honest, courageous, responsible, intelligent and strong in all respects defender of the motherland without bad habits and abnormal addictions. How to achieve this?

Instead of the competition on skill games computer games create specialized training games. For example, instead of racing computer games without rules and survival training game on traffic rules and driving skills of different types of vehicles in the

same interactive and entertaining fashion as in those games. Instead of computer games in which the characters are trying to kill each other, or tell a friend, you must create a game for the development of adolescent boys as future military service officials and defenders of the Motherland, ie in the same manner fun to teach them the basics of military service, the skills of defense against potential enemy and the strategic and tactical thinking on the battlefield!

To implement these solutions to the problem will need to throw all the power (economic, political, and scientific) of our people, to collect the most professional managers, IT professionals, psychologists and teachers! All this will be very very expensive for the state budget. But I think you can save on not very important ways. For example, in the financing of the football team, from the victories which our children smarter, stronger and healthier will not!
