

MODERN APPROACH IN TEACHING FOREIGN LANGUAGES

Tojiboyeva Rano Mahmudovna, a senior teacher of the Military music academic Lyceum of the National Guard of the Republic of Uzbekistan

This article highlights the implementation of some innovative technologies and the use of innovative methods needed for teaching learners at schools.

Keywords: Educational effectiveness, creative thinking, play, innovative technology, technological tools, methods, techniques.

The economic power of each country, the increase in the level of socio-spiritual life is determined by the competitiveness of the education system, the development of science. The content, goals, requirements and objectives of education are changing over time, and its forms and methods are improving. After the independence of our country, the interest in teaching foreign languages has increased and many opportunities have been created for language learners. Today, the use of innovative methods in teaching foreign languages is becoming a necessity to achieve effective results. Emphasis was placed on the need to use modern innovative methods in the educational process, the effective use of ICT and multimedia technologies. At present, the main directions of human activity are becoming integrated systems, information technologies that allow them to fully achieve their goals. In order to develop a similar field of education in recent years, innovative technologies have been introduced. Innovative technologies in the pedagogical process are innovations, changes in the activities of teachers and students, the use of interactive methods in its implementation.

Interactive methods are based on the active, free and independent thinking of each student involved in the learning process. Using these methods, learning becomes a fun activity for the student. When interactive methods are used, students gain the skills and abilities to work independently with the help and collaboration of a teacher the main form of organization of the teaching process is the lesson. In order to organize a quality teaching process, the teacher must be skilled and properly organize and plan the lesson according to the content of the topics, to ensure that all students work consciously and actively during the lesson. Because the teacher is the key to education reform. It is important for every teacher to be able to absorb, process, and apply a large amount of information. In addition to traditional teaching methods, modern information technologies, including the use of computers, help the teacher.

New methods and requirements for teaching foreign languages in the country have been developed in accordance with the Recommendations of the European Framework for Assessment of Knowledge and Skills of Foreign Language Teachers (CEFR). Foreign language science is divided into four aspects (reading, writing,

listening comprehension and speaking), each of which provides specific concepts and skills. Educational technology is the effective use of modern information technology in the educational process. The use of technological means is useful in every aspect of learning a foreign language (reading, reading, listening and speaking). For example, to listen and understand, of course, it is impossible to do this process without a computer, player, CDs. Listening is one of the most important parts of language learning. This requires the student to pay attention to the speaker's pronunciation, grammatical rules, vocabulary and meanings at the same time. The use of modern technologies in the educational process is also an important factor for students to be familiar with the use of information and communication technologies. Today, interactive games are becoming a tradition in schools. It is well known that a variety of play-based activities help students demonstrate their abilities, focus, increase their knowledge and skills, and become stronger. The basis of the use of game technology is an activity that activates and accelerates the student. Psychologists say that the psychological mechanisms of playful activity are based on the fundamental needs of the individual to express himself, to find a stable place in life, to self-manage, to realize his potential. At the heart of any game should be generally accepted educational principles and tactics. Learning games should be based on the subjects. During the games, the student is more interested in this activity than in a normal lesson and is more comfortable. We know that in the current educational process, the teacher and the passive student should play an active role. Focusing on more interactive methods will increase learning effectiveness. One of the most important requirements for English lessons is to encourage and teach students to think independently. Today, English language teachers use the following innovative methods, drawing on the experience of educators in the United States and the United Kingdom: Brainstorm, Creative Problem Solving, Merry Riddles, Quick answers, Warm-up exercises, Pantomime, Acting characters. These methods can be used in all types of lessons. In order to teach the words related to jobs, professionals such as an Interpreter, a Translator, a Writer, and a Poet can participate in the class and talk to students. Moreover, the method "When pictures speak" is more convenient and helps to teach English, to develop students' oral speech and it is necessary to use thematic pictures. The "Quiz cards" are distributed according to the number of students and allow all students to attend classes at the same time, which saves time. As we have seen, each innovative technology has its own set of advantages. All of these methods involve collaboration between teacher and student, active participation of the student in the educational process. In short, the use of innovative methods in English lessons develops students' logical thinking skills, fluency, and the ability to respond quickly and accurately. Such methods stimulate the student's interest in knowledge. The student tries to prepare well for the lessons. This makes students active participants in the learning process. As the education system sets itself the task

of nurturing a free-thinking, well-rounded, mature person, in the future we will contribute to the further development of effective use of innovative technologies by future teachers.
