Abstract

This research paper reveals the main details about distance learning, which has become very popular in our time, especially after the critical condition that people have encountered in moments with the disease, which is widespread as Covid-19. At first glance, this work examines the analysis of identifying the potential for the use and prospects of the need for distance learning for the quality of education, methodological and informational support, the needs of distance learning technologies. Distance learning is implemented through educational Internet, portals created on the basis of educational institutions and is carried out using modern technologies that are widespread due to the increase and popularity in the environment and in the developing world without direct contact with certain personalities and with online interaction between teacher and student.

Keywords: Distance learning, education, internet, modern technology.

INTRODUCTION

Many studies speak about the origin of distance learning. The history of distance learning dates back to the end of the 18th century. At that time, a new concept arose in European countries and it called "correspondent training". Online learning has become much more widespread thanks to the Coronavirus, before that special attention was not paid to distance learning in Central Asian countries, but after the pandemic, people began to create huge opportunities to gain knowledge through this path.

For example during the training, the children learned a lot about the interactive lessons that were provided during the broadcast, and some at the moment have a lot of opportunities to do much more research online when finding any information with an easily accessible level for understanding. Additionally distance learning can also be more cost-effective than traditional classroom-based learning, with students saving on travel, accommodation, time, energy and other expenses.

RESULTS AND DISCUSSIONS

The development of separate learning programs has numerous imperative side-effects on higher instruction. For illustration, the profile of a commonplace undergrad understudy has changed altogether. The normal age of understudies selected at the College of Phoenix is around 33, and more than 50% of all understudies taking online classes are as of now female. Online instruction has moreover impelled changes in

conventional colleges: presently, 93% of all brick and mortar colleges offer online courses. An expanding number of colleges, just like the College of California Berkeley, Harvard College, and the Massachusetts Founded of Innovation offer free online classes called open courseware that include video addresses and tests taken specifically from course dialog.

As innovation makes strides and online programs ended up regarded, instruction specialists anticipate that the remove instruction will continue to grow and complexify within the future. A few pioneers within the domain anticipate that the number of online understudies will developed to nearly 19 million by 2014. To energize this, President Barack Oabama has swore over $500 million for the creation of unused online course materials to fuel the industry.

CONCLUSIONS AND SUGGESTIONS

Overall, the research and founding on the effectiveness of distance learning is inconclusive. For several precise reasons, it should be taken into account that it helps everyone from all sides so that online learning change the mindsets of the people, develop technology, methods of teaching and give some opportunities to learn something much more deeply with easy way for understanding, and sharing a knowledge with others being in different parts of the world. Also, according to research methods, it is possible to identify several signs of improving the quality of life while saving and equipping time by studying exact sciences through distance learning. The courses like Coursera,Duolingo, Khan Academy and other online courses that can help with studies with different kind of qualified professor's who creat their own platform for the teaching and sharing with their methods to studing in a easily way with some understandable techniques.

Anyone can be a distance learner all people can learn anything that they want owing to the apps web sites and get some qualifications after online studies or geared up toward their professional development.
