Abstract: Technology has changed the world dramatically over the last decade. Language learning technology makes it much easier to teach and learn a foreign language in a convenient way. You can access them from anywhere and even take them with you when you are on the move. Technology has not only altered the way languages are taught but also made learning more available, engaging, and adapted for students worldwide. In this article we are going to discuss how technology can support foreign language teachers and their students. important

Key words: educational process, records, daily podcasts, CD players, recorders and cassettes, flexible learning.

In today's rapidly developing age, science and technology are also rapidly developing is growing. Progress is being made in every field. In particular, great changes and significant progress are being made in science. Every subject is new delivering to students using innovative technologies today is one of the main requirements of education. Introducing modern communication technologies into the educational process purposeful and correct, productive use of them, through them, the student learns a foreign language. The most important issue is to increase the interest and increase the effectiveness of teaching is considered. Through this, to use innovative technologies of education opportunities arise and demand increases.

Today, there are several different methods of innovative educational technologies there is. If they use wide and different methods to cover the topic in classes, the effectiveness of the lesson will be, high and students will attend the lesson the increase of interests is ensured. Bringing news to the educational process and it is intended to increase the effectiveness of education through their application. Foreign language the use of various role-playing and action games in the teaching of classes, as well as in the lesson causes an increase in interest in language learning. Pairs of students or and students with others by working in small groups helps them communicate. Teaching and learning a foreign language using modern technologies is the best is one of the best methods.

In this process, including:

- when using computers, the student watches videos in a foreign language, watching and listening to demonstrations, dialogues, movies or cartoons possible;
- listen and watch foreign language radio broadcasts and television programs can be done;
- from tape recorders and cassettes, which are considered a more traditional method use;
- CD players can be used which is also helpful tool to improve the listening skills as well as rise a learner's attention to the hearing content.

This is the use of technical means making the process of students learning a foreign language more interesting and effective ensures that teacher should take into consideration to use all interactive means in a lesson to develop all skills simultaneously. Innovative teaching methods mean organizing lessons using new perspectives and non-traditional forms of learning. These methods and forms of learning play the role of activities that make students enthusiastic about the lesson, we are greatly consider learning styles of students. Due to mixed ability classes teacher is responsible to involve all the members of the class trough organizing team work, project work or organizing portfolios. The variety of activities and interaction can rise self-consciousness and motivation to participate in the learning process being a leader or as an effective member.

Another the most fascinating and noticeable method is the dispute method. In the debate method, it is important to create a friendly atmosphere in the audience, because each participant must interact with others and solve problems with inspiration. This method will improve the skills of expressing ideas in another foreign language. If students do not practice speaking from time to time, their period of study may be longer than those who constantly work on themselves. Such students need to improve their skills, practice more and hone their skills. The debate method is useful because it also develops public speaking skills. At times it can be difficult to express ideas in front of an audience, even in one's own language. Thus, the dispute method improves speech impact and oratory skills.

How educational technology tools support teachers?

1. Creates a better learning environment

In a technology-driven learning environment, flexible classroom spaces where connected devices, audiovisual tools, and purposeful furniture are integrated facilitate positive engagement of students and the mix of independent, small-group, and whole-class learning that is now viewed as essential to student success.

2. Connects the classroom with the real world

Technology in the classroom such as videos, images, and software solutions empower teachers to incorporate the larger real world into the classroom. Turning the theories

into practical experiences motivates students to practice and be deeply immersed in language learning and lead them to self-assessment.

3. Saves time in lesson planning and organization

Technology provides tools and platforms that help teachers plan, organize, and share their lessons more efficiently. Learning management systems (LMS) and dedicated language teaching platforms like Sanako Connect enable teachers to manage course content, assignments, and assessments in a centralized online location.

How technology in language learning supports students?

1. Wider exposure to the target language and culture

Various techniques as well as devices or social network which is used in a class environment increases the students' opportunity for authentic interaction with native speakers and other language learners at various levels within or outside the classroom. Practice leads to perfection and technology-rich language learning makes it possible.

2. Higher motivation and attention

Converting from passive recipients to active learners, learners might feel very excited about language learning and are inspired to practice more, using devices with which they can practice a language through features such as voice recognition and interactive multimedia exercises, etc.

3. Flexible learning

Much more freedom is given to students within the classroom to decide how they approach the language and choose when and where to learn outside the classroom. Self-decision making and individual responsibility-taking inspire more reflective and moving linguistic immersion.

In conclusion, using innovative approaches either technology or interactive activities in English lesson classes scaffolding students' logical thinking skills develop, fluent speech, the ability to quickly and correctly answer to different issues. Such methods make the student eager to get knowledge. The last but not the least, the main objective of using various approaches and techniques to make students find their best learning way and push them study autonomously and self-estimate. The student should prepare thoroughly for the lessons strives. This makes students active subjects of the educational process. The educational system aims to educate a free-thinking, be a critical thinker well-rounded and mature person as a task, in the future we will be innovative teachers develop ways of effective use of technologies more perfectly we can contribute as soon as we leave.
