Students of Chirchik State Pedagogical University

Annotation: In this article, the necessary knowledge and skills of future teachers in the directions of implementing world-class achievements and innovations in science, education, technology and technology, organizing the pedagogical process on a scientific basis, designing it, and creating an innovative educational environment. It was thought about developing their professional competence on the basis of equipping them with skills and qualifications.

Key words: Pedagogical skill, pedagogical outlook, pedagogical image, pedagogical cooperation, pedagogical delicacy, methodical knowledge, competence, skill, education, communication technology, public speaking, culture, ethics, aesthetics.

"We need to harmoniously develop material and spiritual life. The school should be the main link in this regard. The development of school education should become a national goal, a national movement for us."

President Shavkat Mirziyoyev.

One of our main goals is to bring up young people who are active, talented, spiritual and possessors of modern knowledge in our country. The role of teachers in this process is very important. Today, future teachers are required to have professional skills, professional culture, ethics, aesthetics, professional thinking and pedagogical knowledge.

All future teachers in a higher education institution should know the following components of activity in the course of their pedagogical activities:

- understanding the essence of the pedagogical process, having deep respect for the child, ensuring the effectiveness of education and human maturity;
- the task of the pedagogical process is to provide knowledge, educate, develop and determine the criterion of professional activity;
- they are responsible for the objects of the pedagogical process to the person being educated, students and groups of students and individual students, subjects of the pedagogical process - parents, teachers, educators, class team, pedagogical team and

the ability to provide them with education and upbringing based on the requirements of society.

Here, it is important for every future teacher to improve his teaching skills. Pedagogical skill is a set of pedagogical qualities of a person and the ability of a teacher to independently organize professional pedagogical activities. It means that he has reached the peak of his skill. Pedagogical skill represents the development of high-level pedagogical activity, acquisition of pedagogical techniques, as well as the personality of the pedagogue, his experience, civil and professional status. Acquiring pedagogical skills is not only a guarantee of ensuring the effectiveness of education, but also, it increases the reputation of teachers in the community and social environment, and students respect him. The organization of practical actions to improve professional skills creates an opportunity to avoid mistakes made in pedagogical activities and achieve success in relations with students, colleagues, and parents.

It is carried out by regular performance of the following tasks by future teachers:

1. Future teachers will be equipped with the theoretical and methodological foundations of pedagogical skills.
2. They acquire the system of knowledge about the components of the science of pedagogical skills, such as pedagogical technique, pedagogical cooperation (communication), pedagogical delicacy, pedagogical skills, educational skills, management of the educational process, speech culture, educational technology, pedagogical creativity, and reflection.
3. Future teachers will develop a need and desire to independently master the secrets of pedagogical skills reflected in our national customs and traditions and the rich creative heritage of Central Asian thinkers.
4. Based on acquired pedagogical-psychological and methodical knowledge, skills and qualifications, each future teacher forms his personal pedagogical skills.
5. They regularly master the theoretical and practical foundations of organizing and managing the educational process based on the latest modern methods and forms typical of world standards.
6. In order to improve their professional skills, teachers acquire forms, methods and means of personal-creative skill development.
7. Teachers continuously learn information about the nature, function, and structure of the teacher's skills.
8. They form their professional skills based on the free use of modern information technologies and the portal system.

The solution of these goals and tasks will teach future teachers and educators to keep up with the times, live with the pain of educating young people and see the

future clearly. Each teacher will conscientiously imagine the actual problems, goals and tasks of our country and teach them to use their opportunities, knowledge, and experiences with enthusiasm, and educate them to have the skills of a creative approach to pedagogical activities.

Based on this, it can be said that future teachers should regularly develop their professional knowledge, skills, and qualifications, expand their understanding in the direction of management, master scientific and technical achievements, and use modern pedagogical and new information technologies.
