**Abstract:** This article highlights the great importance given to foreign languages in the Republic of Uzbekistan and the innovative technologies necessary for learning them.

**Keywords:** Foreign language, game, innovative technology, technological tools, methods, methods

After our country gained independence, interest in teaching foreign languages increased and many opportunities were created for young people. As our first president, Islam Karimov, said, "Currently, teaching foreign languages is given great importance in our country. This is certainly not for nothing. Today, for our countries, which are striving to take their rightful place in the world community, and for our people, who are building their great future in solidarity and cooperation with our foreign partners, the importance of foreign closure is perfect. As a logical continuation of these ideas, the possibilities of learning foreign languages are provided by the Decision of the President "On measures to further improve the system of teaching foreign languages" adopted on December 10, 2012. Foreign language teaching, foreign language teaching in our republic new methods and requirements were developed in accordance with the recommendations of the European framework for assessing the knowledge and skills of teachers (CEFR). According to it, textbooks were created for students of general education schools and vocational colleges. the rooms were equipped with stands and new information and communication techniques. The demand for learning a foreign

language is also increasing day by day. Foreign language science is divided into four aspects (reading, spreading, listening comprehension and speaking), and each of them special understanding and skills are given in one. Educational technology is the effective use of modern information technologies in the educational process.

as well as education It implies increasing the quality and efficiency of education by introducing modern innovative technologies into the educational process. In particular, there are several advantages of using such information and communication

technologies in learning a foreign language. The role of modern technology in language learning and teaching is immeasurable. The use of technological tools is useful in every aspect of learning a foreign language (reading, reading, listening and speaking). For example, in order to listen and understand, of course, this process cannot be carried out without a computer, audio, or CD. Listening comprehension is one of the most important parts of language learning. At the same time, the reader is required to pay attention to the speaker's pronunciation, adherence to grammatical rules, vocabulary and its meanings. An important factor in the use of modern technologies in the educational process is that students know and use information and communication technologies well. Teaching and learning a foreign language using modern technologies is one of the most effective methods. In this process, including: - using computers, the student can watch and listen to foreign language videos, demonstrations, dialogues, movies or cartoons; - it is possible to listen and watch foreign language radio broadcasts and television programs; - use of tape recorders and cassettes, which is considered a more traditional method; - CD players can be used. The use of these technical tools makes the process of learning a foreign language more interesting and effective for students [1]. Today, teaching through interactive games is becoming a tradition in schools. It is known that the lesson is based on various games, which allows students to demonstrate their abilities, concentrate, improve their knowledge and skills, and become stronger. The basis of the use of game technology is the activity that activates and accelerates the student. According to psychologists, the psychological mechanisms of playful activity are self-expression of a person, finding a stable place in life, self-management, and realizing one's potential. Any game should be based on generally accepted educational principles and tactics. Educational games should be based on educational subjects. In the process of games, the student is more interested in this activity than in a regular lesson and works freely. It should be noted that the game is, after all, a method of teaching. Pupils participate in game lessons with interest, strive to win, the teacher also provides education to the pupil through them. We know that in the current educational process, the student should be the subject. Focusing on more interactive methods will increase the effectiveness of education. One of the most important requirements for English language classes is to teach students to think independently. Today, English language teachers are using the following innovative methods based on the experience of pedagogues in the United States of America and England: - "Problema solvendum" to use this method, the beginning of the story is read and how it ends. "students, students' verdict is referred to; - "Merry riddles" (Merry aenigmata) teaching riddles to students is important in teaching English, they learn and come up with unfamiliar words; Quick answer (cito respondet) helps to improve the effectiveness of the lesson; "Chigil wrote" ("fermentum exercitationes") using various games in the classroom to interest students in the lesson [3]; "Pantomime" this method can be used in a lesson where very difficult

topics need to be explained or when written exercises are done and students are tired; - "Story chain" method helps to develop oral speech of students; "Roleplaying" (characteribus agendi) this method can be used in all types of lessons. To teach the profession, people in professions such as "Interpreter", "Translator", "Scriptor", "Poet" can participate in the class and talk with the students; You can "invite" poets and writers such as U. Shakespeare, A. Navoi, R. Burns. At such a time, using the words of wisdom they said in the lesson will help young people to be educated as perfect people; When the pictures speak (cum imaginibus loquuntur) method is very convenient and helps to teach English language and develop oral speech of the students, for this it is necessary to use pictures related to the topic; - Quiz cards (quiz pecto) cards are distributed according to the number of students and allow all students to participate in the lesson at the same time, which saves time [4]. As we have seen, each innovative technology has its own advantages. All such usurpance envisages cooperation between the teacher and the student, the active action of the student in the educational process [5]. In short, as a result of using innovative methods in English lessons, students' logical thinking skills develop, their speech becomes fluent, and the ability to answer quickly and correctly is formed. The student tries to prepare thoroughly for the lessons. This makes students active subjects of the educational process.
