**Аннотация:** в данной статье не следует забывать о том, что образовательные технологии и реформы, проводимые в глобальном масштабе в рамках деятельности педагогов, станут основой завтрашнего дня каждого общества. В образовательной практике развитых стран особое внимание уделяется понятию компетентности и оно признается центральным, уникальным «узловым» понятием образовательного процесса и даются рекомендации.

**Ключевые слова:** компетентность, информация, личность, педагог, специалист, способность, социальная система, интеллектуальный потенциал, психическое развитие, творческий подход, познавательные качества, мышление, технология.

There is a conscious person who either receives information, perceives it, or transmits it at every moment of his life. The fourth of these three processes is getting rid of unnecessary information. We have talked a lot about freedom of information, and now the problem of getting rid of unnecessary information stands in our way. Unfortunately, the wealth of information that has become your property, willingly or unwittingly, is not a household waste that you can easily dispose of. In this four-stage process, information culture creates a foundation for safe living and working, and becomes a constant assistant.

Competence of working with information of future teachers if we define development as the main goal, then first of all we need to understand the dictionary meaning of the word competence in educational processes, what it is, we need to know

what concept it is. The competence of working with information - looking for necessary information from media sources (radio, television, internet, etc.). finding, sorting, storing, using them effectively, their safety acquiring the skills of provision.

Competence is a certain scientific training knowledge, skills and necessary for effective activities in the field the existence of experience, the word competence comes from the Latin "competens" - suitable, capable, knowledgeable, has comprehensive knowledge in any field of his subject he is an expert and therefore the person whose opinions are more weighty and more authoritative is a specialist in the chosen field.

Competence is:

- ability, ability in the process of carrying out specific life activities
  - qualification experiences acquired by a person during his participation in the activity any activity processes that carry out are of practical importance
  - potential preparation for solving problems related to knowledge of the subject
  - to know the nature of the problem and to develop the ability to solve it;
  - constantly updating knowledge,
  - new to successfully apply knowledge in specific conditions
- to have information
- to have operative and mobile knowledge;

Future pedagogic specialists with modern educational technologies not limited to arming, but always to each teacher his knowledge potential in the process of education and training to increase and set goals and to know the reforms to be implemented and to be able to apply them in practice they should also have the skills.

Global education that technologies and reforms will be the basis for the tomorrow of every society we must not forget. Competency in educational practices of developed countries special attention is paid to the concept, and it is central, specific to the educational process is recognized as a "node" concept. Because he is a pedagogue in practical activity personal competence of specialists:

- first, it is to combine the intellectual and practical components of education task
- and secondly, this concept is based on "result" education and is formed includes the ideology of explaining the content of education
- thirdly, the competence of a person has the nature of integrative activity, because in this process the broad fields of culture and activity are informational, legal a set of homogeneous or closely related knowledge related to literacy includes skills and experience.

Among the knowledge of future pedagogues and during his practical experience that the skills and qualifications of a certain level of competence have been formed we

can also follow in his activities. He is self-discipline, critical thinking, independent work, self-organization and self-control, teamwork, outcomes and possible consequences of different solutions ability to predict. , establish causal relationships, problems can find, form and summarize within minutes. Above Applying the knowledge gained to the skills and qualifications presented achieves during and conducts regular research. In our future pedagogues The competences we need to form will make them mature specialists in the future serves as the main source for their development. Today we can also divide competencies according to the areas mentioned below. The competences listed below are the starting points for each of us young professionals therefore, he should be able to develop his personal and professional competences. We are different because we are constantly moving and searching throughout our lives to acquire real-life knowledge from information sources, in addition to extracurricular activities in the field of independent cognitive activity based on mastering methods through competences, and in society, the right in the field of civil and social activity and our powers perform consumer roles. During our activity, it is domestic competencies in the field including our own health, family life and life including our degrees, our competences in the field of cultural and recreational activities our choice of ways and means of using free time, serves to enrich our personal selves culturally and spiritually. Competence not only in the field of pedagogy, but in every field of our lifestyle has significance. Our society development and scientific and technical achievements and helps us act according to our capabilities. To sum up our thoughts above,

COMPETENCE is a person's literacy, eagerness to get acquainted with new knowledge, knowledge, awareness, conversation potential, desire and desire to open new talents and behavior managing and owning a whole team, how to get things done, is the desire to know new solutions. Individual behavior of a person to us the process of developing a mental map that allows selection and grouping abilities that arise from being able to choose.
