

BENEFITS OF E -LEARNING

Melikulova Nodira Avazmurodovna

Teacher of school 20, Syrdaryo district, Syrdarya region

Annotation: In today's globalization process, we are all witnessing the rapid electronicization of education. The e-learning system provides students with the opportunity to self-examine and process the knowledge gathered from all educational materials using various test sets. At a time when some complications are emerging in education, we would not be wrong to say that electronic learning tools are making the student's learning process much easier. This article discusses the use and importance of e-learning.

Key words: Moodle, e-learning, higher education, educational model.

Introduction: E-learning is an educational model that promotes access to knowledge through platforms or digital environments.

[1]The process of organizing lessons with the help of electronic educational resources effectively helps students to receive the knowledge they receive not only through hearing, but also through visual senses, and to deeply understand the ideas and content of concepts.

[2] Knowing the legal basis of using digital information and Internet resources is very important for a modern teacher, because he can work both as a consumer of electronic resources and as a developer of them. Using electronic materials within the framework of distance learning technologies, the teacher engages students in the exchange of information using local and global networks. The teacher should focus on the Internet and show examples of competent information behavior.

There are many definitions of the educational concept in the pedagogical literature. For example, T.A. Ilyina - "The interaction between teachers and students and the process of cooperation between students, in which education, training and human development are carried out." And the famous "pedagogical dictionary" M. and A. Yu. Kodjarkovyov said: "Education is a specially organized, controlled, managed and interaction between students and aimed at the development and mastery of students. - The ability to teach according to the goals. " The last interpretation is almost accepted - many authors refer to it.

Definitions known to the authors and the interaction of other people, teacher and students are shared, but the interaction of the learner with the learning environment in which the learning process flows is not taken into account. In addition, the definition of the concept of "Education" usually focuses on general and general education. However, when deepening the specific features of learning processes, specification description is needed every time. For example, the concept of relatively higher education "training a specialist" or "teaching at a higher school" should be related to the explanation. From our point of view, it is a joint work of the teacher and student (s) aimed at acquiring the knowledge, methods of activity of a specialist in secondary

school, while focusing on the information of learning such words, which meets the requirements of the future profession. and the characteristics of communication that are carried out using educational information materials and necessary equipment.

The functions of the teacher with the joint activities with the students should include:

[3] E-learning platforms also have advantages and disadvantages, and it is important to know how to use them legally. He builds networking with his students on an understandable legal basis, drawing their attention to problematic issues.

Main part: Some of the advantages of this type of platform are: Primarily flexible and affordable training. The combined power of technological equipment with the Internet. Abolition of geographical and temporal distances. Allows you to use the platform with minimal knowledge. Freedom to learn at your own pace and at your own pace.

Disadvantages of e-learning platforms Higher demand and pressure than a face-to-face course. Lack of uploaded study materials even more awkward for teachers, because you need to know not only about teaching your subject, but also about teaching ICT, sufficient time for students to be distracted from the lesson. A variety of distractions from education. When using e-learning tools, special attention should be paid to:

- development of methodological students to be applied to educational materials; - do not exceed the duration of using animation programs for more than 25-30 minutes;

- the concepts of the presented topic are discussed by the teacher and students in a two-way communication;

- achieving that the student will independently rework the presented film and form new concepts: - determine the criteria for evaluating the teaching results. [4]

Summary: In conclusion, we can say that the advantages and disadvantages of e-learning platforms are very similar in number. If you prefer one type of training over another, that's up to you.
