Abstract

Bu maqola orqali hozirda mamlakatimizda ingliz tilini turli hil metodlar yordamida o`qitish va o`rganish shuningdek hozirgi kunda ta`lim berishda zamonaviy interaktiv o`qitishning foydali taraflari qay darajada ommalashib kelayotganligi haqida.

Abstract

Through this article, there is given information about the advantages of modernized interactive ways of learning English through various methods and the extent to which it is becoming popular in our country.

Keywords: *interactive technologies, various methods, web sites, laptop, picture, white board, power point, funny activities, student, role play,*

In our modern world have many ways to learn English with modern things. It is fact that in today's world, learning is done in different ways, and this learning could be done through online education, gadgets or programs. That is, the easy and speed of learning with interactive methods are currently being chosen by learners. Another factor to consider that learning foreign languages could be a problem or it would be difficult to find a good teacher who is able to teach you some interactive ways, of course you can look for a way in which you turn to the Internet or websites, and this is considered one of the fast and easy ways. If you have any kind of good level and with this way you should use in a social experience an independent learner. And also, you need to find as modern teacher who use in their method with attractive knowledge.

At the present, you know that the education system is improving, and as a result, learning and teaching are carried out through new methods and modern technologies. In modern teaching methods are very advanced and there are many types, one of them is interactive learning technology. The term «interactivity» comes from the English words «Inter» and «act» and means «interaction». Interactivity in learning is understood by modern researchers as being in constant, active interaction, in dialogue mode, the common action of all participants in the learning process. With this direction, you will not learn the old methods, that is, lessons with a blackboard and a chalk, besides that, you can get high-quality and fast knowledge through gadgets, power points and whiteboards, and educational games by referring to websites. This technology is used not only in our country, but also in many countries with modern education. And this is having a good effect, because education through this technology

is fast, easy and of high quality, and it brings convenience to the learner. And this technology includes: teaching through web sites and with power points pictures through decorative looking materials, that is more modern with whiteboards rather than through chalk, and in addition, the teacher should having relax while the learners will be able to approach multi-length or short films with modern technologies. The main aspect of interactive technology is educational games, that is, activities played on the Internet, invented by the teacher. Moreover, through the interactive technology, you should use these methods:

- ✓ Involves facilitator and learners.
- ✓ Encourage and expect learners to participate.
- ✓ Use questions to stimulate discussion, emphasizing, the value of answers.
- ✓ Give participants hands-on experience.
- ✓ Use teaching aids to gain and retain attention.

Applying games in the lessons, the following tasks are solved: the control of knowledge becomes freer, psychologically free; students' painful reaction to unsuccessful answers disappears; the approach to students in learning becomes delicate and differentiated. As practice has shown, studying in the game is liked not only by younger students. Therefore, the application of game techniques and methods remains one of the main ones in our pedagogical activity. Well, games, especially role-playing, imitation involve interactive between participants.

Moreover, from this technology we could become good knowledge and then the development of our individual level based on our own background comprehension because during accomplishing we could realize our growing accumulated skills.

In conclusion if we take into account the rapid growth of the present time, we will definitely have to go in this direction in one wave because all learners strive towards modernity. Interactive technology is also included, in this direction, it is possible to acquire knowledge that is effortless, quick and helpful. The difference from other technologies is the increase in the level of speed and individuality.
