Annotation

This article highlights the impact of artificial intelligence on science in English language teaching and the scientific advances achieved with its help, as well as the creation of creative methods using artificial intelligence.

Keywords: digitization, interactive methods, project, technology, language, English, independent language learning, educational technologies, project, interest, activity.

Introduction. To broaden students' perspectives, traditional institutions may include learning an artificial intelligence language. The benefits of using artificial intelligence in e-learning are incredible. Here are just a few of the educational benefits. Artificial Intelligence (AI) seems to be entering all areas of our lives today. From driving vehicles to sweeping floors, AI has long since moved from science fiction to science reality. As a result, it's no surprise that AI can help us learn languages more effectively. Imagine learning a foreign language in just a few months with just twenty minutes of reading every day, fully assisted by artificial intelligence. Isn't that exciting? In 2023, this is true. By spending a little time each day with the help of artificial intelligence, the user will be able to spend a little time each day with the help of artificial intelligence. From a teacher's point of view, AI language learning solutions can identify gaps in the curriculum and help them identify what they can improve on in their lectures or assignments, which questions are wrong, and which students need extra help. can help. Deeper Learning Engagement Thanks to AI used in language acquisition, students can study at their own pace, set their own goals, and follow a personalized curriculum from anywhere in the world.

With a personalized approach to learning that varies from student to student, teachers don't have to review the same content every year. In addition, AI can help develop engaging games, quizzes, and other learning and exploration activities that align curriculum with student interests. Language bots. Chatbots have gone from generally useless idiots to sophisticated helpers capable of tricking you into thinking you're talking to a real person. People are getting smarter and are using chatbots to learn foreign languages. All you need to do is talk to an AI bot and learn from experience. AI-learning chatbots respond to your messages with personalized responses and can even evaluate your performance or give you tips on how to improve. What else is better? When you're talking to a computer, you don't have the fear of failure if you're talking to a real person. Some of the most popular chatbot apps are Duolingo, the most popular language learning chatbot in the United States (and possibly the world).

This chatbot is a platform that allows it to understand the user's context and give them contextual and individualized answers, meaning that different users will get different answers to the same question. Virtual language tutors, the leader in language learning chatbots, have enabled thousands of people to learn a new language without the embarrassment of miscommunication with a native speaker. At first, the bots could

only speak English, Spanish, German or French. Now they can chat on a variety of topics (and growing) in over 23 different languages. PC Magazine named Duolingo one of the best language learning programs. Andy. Do you speak English as a second language? Andy the Chatbot is your new English teacher and he's here to help you improve your skills. Andy can teach you grammar, increase your vocabulary with the built-in dictionary, and even provide a simple interface for informal conversation. Andy can even join you in language games. A learning experience for students and teachers when artificial intelligence and education come together will change. Student personalization, instant feedback and adaptation to their requirements developed with language learning such as language bots, machine translation and personalized textbooks artificial intelligence technologies help. It is clear that such tools are language can greatly help learners to master the language, especially the traditional ones when used in conjunction with learning methods. Students learn one technique from another they don't have to choose; Instead, they have the most comprehensive language curriculum for themselves with many alternatives available to create their own favorite method can mix.

Summary. The use of artificial intelligence in English education, the importance of artificial intelligence in teaching English to the younger generation, and the importance of artificial intelligence in teaching English were given.
