**Annotation:** Project financing is fully or partially budgetary or extra-budgetary centralized resources of funds, ministries and associations, the state if the project is being implemented at the expense of the enterprises' own funds feasibility study is mandatory. The project is financed from other sources if so, about the effectiveness of the investment technical and economic justification of the project The investors themselves are independent in deciding whether it is necessary or not defines.

**Key words:** Innovation, investment, budgetary, system, statistics, potential, rankings, function, support, policy.

The investment policy implemented in Uzbekistan is of independence ensuring fuel energy and grain independence from the first years, implementing structural changes in the economy, increasing the export potential and it is a priority to increase the production of import-substituting products open doors for supporting industries, attracting foreign investments focused on such things as carrying out the policy. Actually what is the investment and investment projects?

Investment is the dedication of money to purchase of an asset to attain an increase in value over a period of time. Investment requires a sacrifice of some present asset, such as time, money, or effort. In finance, the purpose of investing is to generate a return from the invested asset. The return may consist of a gain (profit) or a loss realized from the sale of a property or an investment, unrealized capital appreciation (or depreciation), or investment income such as dividends interests or rental income, or a combination of capital gain and income. The return may also include currency gains or losses due to changes in the foreign currency exchange rates. Investors generally expect higher returns from riskier investments. When a low-risk investment is made, the return is also generally low. Similarly, high risk comes with a chance of high losses<sup>1</sup> Most people agree that there must be something to learn about investing from Nobel laureates, dedicated academics, and quantitative practitioners, who have provided us with truly landmark insights, if this body of knowledge can be presented in a clear and meaningful way. Here you will see that the findings from this research are not abstruse because of their messages; they are abstruse because of the way the findings are

presented. There is no question that successful investors-like successful physicians, airline pilots, and accountants- after completing a significant amount of initial training must continuously "retool." In the case of successful investors, by "retooling" I do not mean staying abreast of the latest product, industry, and economic trends. I mean continuing to stay abreast of what we continue to learn about the process of investing

Economic development manifests itself as a complex process and in this there are several indicators of growth in this field: gross domestic product, income, profit, level of consumption, health care, length of life, literacy, quality increase and can be reflected through the like. That's why the idea of the project. For all cases, the same content may not be acquired and the project developed there cannot be a single model form of output and its assessment. Own in turn, projects represent their individual elements and indicators a number of targeted activities, implementation of the project and achievement of the intended result consists of focused management system and others. The project develops the relationship between the environment and a certain product Consider the example of a product development project for a manufacturing company possible Normal, long-term operation of the organization is in the conditions of changes and renewal serves as a basis for the emergence of demand. This is the result of the project causes it to appear. When the project really started, it begins to develop independently. During the implementation of the project participants focus on performing their tasks.

The act of investing has the goal of generating income and increasing value over time. An investment can refer to any mechanism used for generating future income. This includes the purchase of bonds, stocks, or real estate property, among other examples. Additionally, purchasing a property that can be used to produce goods can be considered an investment.

In general, any action that is taken in the hopes of raising future revenue can also be considered an investment. For example, when choosing to pursue additional education, the goal is often to increase knowledge and improve skills. The upfront investment of time attending class and money to pay for tuition will hopefully result in increased earnings over the student's career. Because investing is oriented toward the potential for future growth or income, there is always a certain level of risk associated with an investment. An investment may not generate any income, or may actually lose value over time. For example, a company you invest in may go bankrupt. Alternatively, the degree you investing time and money to obtain may not result in a strong job market in that field.<sup>2</sup>

Source: Renaissance Capital, 2021

The year 2020 was, to say the least, volatile in the sense that investor confidence oscillated from deep lows to soaring highs. The S&P index witnessed a -33.9% drop from February 19 to March 23, 2020. This was the shortest bear market in history. Then, March 24 ushered a new bull market, closing in August of 2020 to the pre-pandemic range. However, the story is not the same across investment vehicles and markets. <sup>3</sup>

To conclude, Project financing is fully or partially budgetary or extra-budgetary centralized resources of funds, ministries and associations, the state if the project is being implemented at the expense of the enterprises' own funds feasibility study is mandatory. The project is financed from other sources

if so, about the effectiveness of the investment technical and economic justification of the project. The investors themselves are independent in deciding whether it is necessary or not defines. Today, investment projects are receiving a lot of attention, and if they are supported, the country can achieve economic growth in the future.
