Abstract. In this article, it depends on the organization and management of the educational process of the student in the continuous education system. Information is given that he must have received quality education

Key words: scientific-methodical research, pedagogical technologies, chemical natural resources, innovative technologies.

The use of innovative technologies implemented in the educational system of developed countries in chemistry education is an important tool for increasing the effectiveness of the lesson, it is known in the next scientific and methodical studies.

The main reason for this is that students' activity and interest in the lesson increases when using innovative technologies. Pupils fully participate in the educational process. New pedagogical technologies are also important for the implementation of the educational aspect of education. The inextricable connection between education and training gives chemistry a great opportunity to direct the process to the formation of a person who has matured in all respects. The idea of national independence is used as a basis for the educational aspect of chemistry education. In its formation, it is important to describe the fact that our Republic is extremely rich in chemical natural resources and the development of production of products from them in the relevant topics of chemical sciences. All types of education can be implemented in the teaching of chemistry.[1]

With the independence of the Republic of Uzbekistan, fundamental reforms were implemented in the economic and social spheres. The main essence of these reforms is the all-round development of the young generation, their spiritual wealth, high potential, knowledge, skills and qualifications. [2]

Such a high development of the student depends on the organization and management of the educational process in the continuous education system. In order for a well-rounded person to be well-rounded, he must be mentally and physically healthy, and he must have received a high-quality education.

In the national personnel training program, great attention is paid to the development of students' knowledge and outlook in the educational process. It is emphasized in the national program that the development of talented students is very important for the development of our Republic.[3]

One of the requirements of the "National Personnel Training Program" of the Republic of Uzbekistan is the use of pedagogical technologies in the educational process, the creation of a new modern method of teaching, increasing the student's interest in a certain activity, developing the culture of communication, students' cognitive activities. development of new methods of activation.
