Foreign in countries before school education \_\_ system activities one series countries in the example see \_\_ we go out

Japan - a lot fast developing state that 's it \_\_ case basically of the Japanese by nature hard work and business acumen with it depends \_\_ In the world all news and ups and downs towards aspiration , eng last \_\_ of achievements use and them more development is \_ Japanese of the people forever national habits turning around the rest in Japan very from long ago of the people mental of possibilities user science and technique apply \_\_ policy the most important sit down \_ holds \_ Before school

education \_\_ system management modern requirements based on in formation and children today's time to the soul suitable by doing in education abroad of experience place \_\_ big is considered This in the system efficient things take went and to success achieved abroad countries very many p \_ of course Here it is so to achievements achieved from the states one this France . Our country long in years since this state with wide cooperation connections to the road put \_\_ \_ Current on February 24 of the year before school education and talented students with work in the field foreign cooperation development in order to of our country in France embassy delegation Paris of the academy rector **Christoph Carrero** with a meeting spent \_

At the meeting Uzbekistan \_\_ diplomacy representative office leader **Captain Rustambayev** France to the side in our country before school education \_\_ field to develop being directed attention \_\_ and done being increased wide extensive \_\_ of work to the details around stopped . \_\_ That's it in place in Uzbekistan talented children with work and they are for social elevator task which performs mechanisms to the road being put note done equal to President schools , creativity and specialized of schools activity about in detail data too shared . Talented children with at work France to learn from his experience interest presence separately it was emphasized . He is in France before school education in the field take going systematic affairs on the surface briefly information will give it 's France President of society intellectual development acceleration and to inequality I'm done to give in order to before school education to the system big attention is giving said \_ In practice in order according to , in France before school education from 3 years Beginning and all for mandatory the fact that note was made . , as well as the capital in the region before school education institutions whole country across example to be in order to " perfect of the 21st century before school education institution " project done being increased known did \_ This is it from the project intended main the goal everyone education with cover get the system is to create . This is it from the project again one the goal is to bring parents to school education system subject as to see and them that's it to society integration to do

**Development principle** . This any principle \_ the object appear to be , to be formed and change in the process seeing exit , his controversial feature open throw away , quantity and quality changes account to get , one from the situation another to the circumstances transition requires the opportunity .

Before school education in institutions education process quality and efficiency implemented this principle the following requirement does :

- Management in the object amount and quality changes to see, this of changes character ( progressive or regressive ) to determine possibility giver education of quality systematic monitoring transfer \_

- Managed from the real quality of the object potential to quality of the transition reasons and tools to determine

- Management not only management of the process defined in the circle activity to show , maybe his to direct the development of this as a result it is new quality to the situation achieves ;

**To the topic about books analysis** . Before school pedagogy [ Text ] textbook FR Kadirova International pedagogy Academy academician , professor, PhD ,

Sh. Q. Toshpulatova - associate professor , NMKayumova - associate professor , M. NA'zamova Tashkent: Thought Nash. Riyoti , 2019. - 688 p. This in the textbook before school pedagogy of science main issues , his theoretical and methodological basics , before school age to the children physical , intellectual , moral , aesthetic , ecological , economic , legal , labor upbringing of giving content , means , form and methods in Uzbekistan before school education organize of reaching history , before school education system , departments , manager , methodist by leadership and control to do principles , educational to processes modern pedagogical , innovative technologies of application scientific and methodical features illuminated . Textbook pedagogy higher study countries , pedagogy of colleges before school education studying in the field student , students and before school education in the field activity showing leader and experts ,

Uzbekistan Republic High and medium special education of the Ministry No. "1023" dated November 2 , 2019 to the command basically to the publication recommendation ( Certificate No. 1023-060) TASHKENT-2019

**Analysis and results** . In the country demographic of the situation little by little improvement account received without , children kindergarten The demand for services is constant respectively grow up is going of Russia big in cities before school education institutions lack of there is Before school education in institutions seats enough not \_ Parents \_ his child from birth after immediately children to kindergarten they write and it 's always there \_ to go guarantee not \_ The same at the time In Russia, 400,000 children go to kindergarten access for queue is waiting State in front of , first in turn , of the population all layers for before school from education use opportunity provide task is standing

**Subject methodology** . Before school education institutions qualified pedagogue to personnel has been the need Before school education institution administration to employees their professional preparation and children with work experience according to requirements to reduce forced \_

Current in the Russian Federation at the time disabled children number increase note Date : 2002 relatively two even many " separately to education needs children " in society insulation not to be done need , therefore for inclusive education necessary

\_ Modern of society socio-cultural environment features is changing \_ multiculturalism , many nationality , polyethnicity . Therefore \_ before school education institutions for a lot cultured education environment set up reach , a lot cultured education space Create necessary \_

Children , including Russian \_ language enough don't know the children bring up and development for new technologies search need \_ Before school education in institutions education process of participants different and a lot edged needs satisfy for of institutions types ., education services and them done to increase of approaches enough level to diversity has been need \_ The majority before school education institutions search mode the work mode development mode pass \_ Before school educators , pedagogy education institutions of students methodical qualification increase necessity \_ Current at the time of parents social order , their before school education institutions by displayed to services to be placed requirements is changing . If a lot ten years during health storage and many of parents their children maintenance to do children kindergartens of activity main directions calculated if so , today in the day main and addition of education education programs more and more more requirements is being placed .

**Summary** by doing that's it to say until school \_ education in institutions present in the day modern approach the most necessary aspects one being is considered Why? present day young people and children to the news new to methods curious will be From this except present at the time of parents social order their before school education institutions by displayed to services to be placed requirements is changing . Exactly modern methods of technologies use parents students satisfies . This of methods application the first in line pedagogue educators it also depends on creativity . Educator's development and own \_ on relentlessly research , education harmonized without news create get , foreign pedagogy deep to know with abroad experience news own \_ \_ activities get rich to go and them in practice apply take with is important . Before school education institutions view , re to build , to school education in institutions that's it direction for responsible officials preparation and our goal has been before school in institutions education receiving , being educated the children before school education in the organization education form is comprehensive mature perfect people by doing from upbringing consists of
